

How-To Fishing Tips

Use black Ugly Bug or hair jigs as your first selection for Percy's walleye. Tip these jigs with live bait or pieces of gullet (fish throat). Second selection of jig colors would be yellow or orange. Work slowly along bottom in deep holes where rivers exit and enter.

- N ... northern pike

For Percy Lake Northern Pike it is recommended that anglers work the weedy bays with daredevil style spoons in fluorescent colors. Also of value are weedless spoons such as a silver minnow with pork strip. During the heat of late July and August anglers may entice this fish by working a silvery Heddon Tiny Torpedo on surface in the lakes shallow bays. Deep trolling with Rapala style plugs behind a 2 oz. Bait-Walker Sinker will produce both walleye and northern in Percy's deeper structure.

Special Note: The little current river has native brooktrout below and above Percy. To learn more how this area should be fished you might write Dan D. Gopen Sr., Rte #1, Big Lake, Minnesota 55309 for one of his books on river fishing. A FREE brochure is available explaining how-to and where-to fish rivers and the books available.
